SCHOOL OF ELECTRICAL ENGINEERING FACILITIES

Telkom University has the following facilities and infrastructure.

Multimedia Room

Auditorium

Academic Administration
Service Room

Open Library

Student Center

Public Working Space

Private Working Space

Convention Hall

Football Field

School of Electrical Engineering (SEE) has 19 laboratories under 4 (four) Research Divisions, including Control, Electronics, And Intelligent System (CEIS), Intelligent Communications And Networks (ICON), Signal Processing, Information Security, And Computer Engineering (SPICE), Sustainable Material, Instrumentation, Energy, And Computation (SMART)

STUDY PROGRAMS

 S1 TEKNIK TELEKOMUNIKASI  	 S1 TEKNIK ELEKTRO  	 S1 TEKNIK KOMPUTER  	 S1 TEKNIK FISIKA  
UNGGUL	UNGGUL	UNGGUL	UNGGUL
 S1 TEKNIK BIOMEDIS 	 S1 TEKNIK SISTEM ENERGI 	 S2 TEKNIK ELEKTRO  	 S3 TEKNIK ELEKTRO 
UNGGUL	BAIK	UNGGUL	UNGGUL

National Accreditation Criterion:

1. UNGGUL = Excellent
2. SANGAT BAIK = Very Good
3. BAIK = Good (the highest accreditation for new study program)

STUDENT ACTIVITIES

• STUDENT EXCHANGE

• STUDENT ACHIEVEMENT

• SHORT COURSE

• COMMUNITY SERVICE

• INDUSTRIAL VISIT

• BENCHMARKING

and many others

SEE RESEARCH DIVISIONS

CONTROL, ELECTRONICS, AND INTELLIGENT SYSTEM (CEIS)

CEIS encompasses a wide array of research laboratories, including Automation Systems, Intelligent Control, Robotics, IoT, Signal Processing, Biomedical Systems, Power Systems, and IC Design, fostering innovation across these domains. The division actively engages in labwork, community service projects, supporting student competitions, organizing lab activities, and providing training and certifications, all while continuously planning for future research endeavors to address local and global challenges.

INTELLIGENT COMMUNICATIONS AND NETWORKS (ICON)

Focused on Intelligent Communications and Networks, is dedicated to the development of knowledge and technology in the telecommunications field. Highlighting areas such as wireless communication, satellite and radar systems, optical communication, networks, and Internet of Things networks, the lecturers make significant contributions to scientific advancements in teaching, research, and societal involvement. Through research and strategic alliances with industry and government partners, the ICON Research Group aims to make substantial contributions to improving worldwide connectivity and advancing communication technology

SIGNAL PROCESSING, INFORMATION SECURITY, AND COMPUTER ENGINEERING (SPICE)

focused on developing innovative solutions that contribute to the advancement of technology in multiple sectors, including telecommunications, artificial intelligence, security, and embedded systems. The division actively collaborates with academic institutions, industry partners, and governmental agencies to conduct applied research, publish high-impact papers, and develop real-world solutions. Our research has contributed to advancements in healthcare, telecommunications, cybersecurity, smart cities, and next-generation computing systems.

SUSTAINABLE MATERIAL, INSTRUMENTATION, ENERGY, AND COMPUTATION (SMART)

focuses on scientific development in the fields of materials, instrumentation, energy, and computing, with a mission of independence and sustainability in these fields. Activities focus on fundamental research as a foundation and stepping stone to technological readiness based on sustainable development goals.

CENTER OF EXCELLENCES

CoE Smart Transportation And Robotics (STAR)

CoE Sustainable Energy and Climate Change (SECC)

CoE Biomedical & Healthcare Technology (BHT)

PUI-PT Advanced Intelligent Communications (AICOMS)

PUI-PT Intelligent Sensing - Internet of Thing (IS IoT)

RESEARCH

CENTER OF EXCELLENCES

CoE Smart Transportation And Robotics (STAR)

Focuses on research and development in smart transportation and robotics, covering automotive systems, railways, and transportation control and operations, with the aim of producing innovations that have a real impact.

CoE Sustainable Energy and Climate Change (SECC)

the only CoE in Indonesia that offers a comprehensive approach to addressing energy-related challenges—from energy source management and environmental impact assessment to the development of qualified human resources in the energy sector. SECC's expertise spans a wide range of energy types, including new and renewable energy sources such as solar, wind, and biomass, as well as conventional energy sources.

PUI-PT Advanced Intelligent Communications (AICOMS)

Focuses on the development of artificial intelligence and intelligent communications technology, oriented towards research and innovation to support the advancement of intelligent connectivity in the future

CENTER OF EXCELLENCES

CoE Biomedical & Healthcare Technology (BHT)

focuses on research and innovation in biomedical engineering and healthcare technology, emphasizing the socio-economic and psychological wellbeing of patients and society. It drives basic and applied research through a collaborative ecosystem involving Academia (e.g. domestic and international medical faculties), Business (MedTech industry, hospitals, and clinics), Government (Ministry of Health and local authorities), and Society (professional associations).

PUI-PT Intelligent Sensing - Internet of Thing (IS IoT)

focuses on the development of research, innovation, and implementation of intelligent sensing and Internet of Things (IoT) technologies. Develops technologies capable of collecting data from various physical phenomena through sensor devices, data collection networks such as Wireless Sensor Networks (WSNs) and IoT, then processing it into accurate information using intelligent computing technologies such as Artificial Intelligence (AI).

RESEARCH PRODUCTS

Patriot games

Military Posture Check

Headup display for vehicular adhoc network

MyGlucobby

CholMe

BYSONICS Smart Vest

Digital Tension Meter

Smart Parking

Cubesat

X-Band Wave Absorber Using Constitutive Material Parameters

Wideband Circularly Polarized Sectoral Antenna Array Fed by Proximity-Coupled Method

Enhancing Measurement Performance of EM Wave Absorber

Autonomous UVC Mobile Robot

Boat for Water Quality Monitoring System

Early Warning System for farming

Drone for Water Quality Monitoring System

Integrated Add-On Interface Tele-USG

T-guard electric car

Firefighter Robot named ARJUNA

Smart Fitting LED Lamp

DEVYRA
